

# Market Access RICI Metals Index UCITS ETF

## ETF description

The Market Access RICI Metals Index UCITS ETF (the "Fund") is a UCITS compliant Exchange Traded Fund. The objective of the Fund is to mirror, as closely as possible, the performance of the Rogers International Commodity Index® - Metals (the "Index"). The Fund will gain exposure to the Index by investing in a portfolio of securities and entering into one or more derivative contract(s) with UCITS eligible counterparties under which the Fund exchanges the performance of the portfolio of securities against the performance of the Index.

## Index description

The Rogers International Commodity Index® - Metals is a US dollar-denominated total return index and a sub-index of the RICI®. The Index consists of the 10 metals and minerals components of the RICI® and provides exposure to a range of underlying resources such as gold, copper and nickel. These are represented through futures contracts.

## Key risks

Investors in the Fund are exposed to fluctuations of the Index which can go down as well as up and may be subject to significant volatility due to market conditions. Investors can lose up to the amount initially invested.

Changes in foreign exchange rates may affect the value of your investments.

The Index is based on commodity futures. The value of commodities is volatile and subject to market conditions and to whether or not any alternatives to that commodity exist. Commodity prices can be influenced by the prevailing political climate and government stability in commodity producing nations.

In order to replicate the Index, the Fund enters into a swap derivative agreement. Investors are therefore exposed to the risk that the swap counterparty (currently Barclays Bank plc) defaults, in that case they could suffer substantial losses on their investment.

The price of the Fund quoted on the exchanges can be affected by several factors and may deviate from its Net Asset Value (NAV). On exchange liquidity cannot be guaranteed, meaning timing of entry/exit into the Fund may be affected by market conditions.

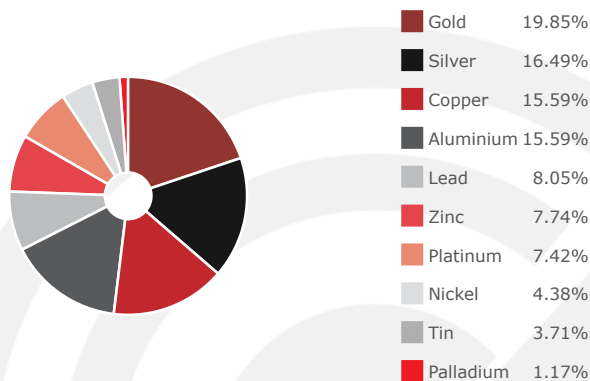

UCITS ETF's units / shares purchased on the secondary market cannot usually be sold directly back to UCITS ETF. Investors must buy and sell units / shares on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying units / shares and may receive less than the current net asset value when selling them.
